Subject: Application for Software Engineer / Java Developer Position

Dear Hiring Manager,

I am writing to express my interest in a Software Engineer / Java Developer opportunity at your organization. I am a Software Engineer with experience in Java, Spring Boot, Hibernate, SQL, Microservices, and RESTful API development, along with hands-on exposure to Node.js and Express.js. I enjoy building scalable backend systems and contributing to clean, maintainable software.

In my current role at Levithan Private Ltd, I have worked on backend services using Java and Spring Boot within a microservices architecture. My work has included designing RESTful APIs, optimizing SQL queries and database schemas, and collaborating with cross-functional teams to deliver production-ready features.

Earlier, as a Java Full Stack Developer Intern at CodeSquadz, I built full-stack applications using React.js and Spring Boot, implemented JWT authentication and Spring Security, and worked with MySQL and MongoDB. I also have experience with Node.js and Express.js, which gives me a broader understanding of backend development and API-driven applications across the Java and Node.js ecosystems.

My project experience includes a Spring Boot-based Hotel Microservice Project with service discovery, API Gateway, and inter-service communication, a Contact Manager Microservice, a GEN-AI full-stack web application, a JWT authentication application, and a blogging platform using Spring Boot and Hibernate. These projects have strengthened my understanding of backend architecture, databases, authentication, and full-stack application development.

I would welcome the opportunity to bring my Java, Spring Boot, Microservices, SQL, and Node.js skills to your team and continue growing as a software engineer. Thank you for considering my application. I look forward to the opportunity to discuss how my background can contribute to your organization.

Sincerely,

Harsh Parjapati

Software Engineer & Java Developer
